THE MOST LABOR-EFFICIENT PRECAST/MASONRY WALL SYSTEM IN THE MARKETPLACE

StoneTree™ Fence Wall Systems feature **AFTEC**'s patented "Combo-Cast™" wall panel and column sections which are integrally cast as one-piece, reducing labor requirements by over 50% compared to all other precast and masonry fence wall products in the industry.

The **StoneTree™** proprietary Rigid Footing Support System provides a streamlined method of installation, resulting in a significantly faster, safer and more cost-effective installation than comparable products in the marketplace.

StoneTree™ Fence Wall Sections are easy to remove or replace if necessary. A damaged section may be lifted out and replaced without any impact on the adjacent fence wall sections. Sections may also easily be removed to allow for the installation of temporary or permanent access.

StoneTree™ Fence Walls have highly defined formed texture on both sides of the wall, offering an aesthetically pleasing view from all angles. Logos and architectural designs may be inserted on columns to personalize your project.

StoneTree™ Fence Walls are available in standard heights of 3 feet to 8 feet, and may be engineered to be stacked for higher heights.* Combination low wall / high column walls allow decorative accents such as wrought iron to be added for extra security or personalization.

StoneTree™ Fence Walls may be customized for the installation and use of security attachments such as razor wire, wrought iron with spikes, security cameras, lighting and other enhancements to ensure the area being enclosed is protected at all times.

*For highway/freeway sound walls, inquire about **SoundTec Concrete Form Systems** (www.SoundTecWalls.com).
